### PROJECTS

- ULTRASONIC distance measurement**

This project was designed using microcontroller 8051 and an ultrasonic sensor basically was used for distance measurement.

- THYRISTOR based soft start of three phase induction motor**

In this project efforts are made to change the starting method of three phase induction motor from conventional method of DELTA/WYE to soft start or thyristor based soft start. Main objective of the project is to reduce the starting current through thyristor switching.
